

Corporate Fact Sheet

● The Company

POWRtec is a dynamic, unique and innovative energy management company producing, developing and manufacturing tomorrow's intelligent energy management systems today. POWRtec's intelligent metering systems have the potential to deliver enormous cost savings for public utility companies and other businesses by empowering them to control and monitor energy usage and minimizing excess capacity. This, naturally, is also of great benefit to the environment.

● Solving the Energy Dilemma

With a growing population and huge energy demands, the only solution thus far has been to build new power plants. Unfortunately, utility companies cannot quickly ramp up or scale back their energy production, and therefore a lot of excess electricity goes to waste. POWRtec's networked intelligent metering systems solve this dilemma by enabling utility companies to monitor and measure exactly what their energy is being used for, allowing them to produce energy accordingly.

● Products

POWRtec's groundbreaking intelligent meters are innovative and unique and will provide unprecedented value by combining the most advanced technology with simplicity and ease-of-use. POWRtec's state-of-the-art single-phase and three-phase meters can be tailored to meet custom needs by the in-house R&D department. As production has been outsourced to China, unlimited capacity and range ensures virtually unhindered scalability of operations.

● Market Focus

The market for POWRtec's products is first and foremost of a global nature. The energy market attracts some of the world's most important investors and with a recent emphasis on sustainable energy, the market is one of the fastest growing industries. The increased industrial activity in countries such as China, Brazil and India has resulted in an ever-increasing demand to effectively manage and monitor energy consumption as energy production and CO2 emissions are sky-rocketing. POWRtec's meters seek to curb the drawbacks of this increased activity, limiting excess production and pollution.

● Use of Proceeds

POWRtec will use the proceeds aggressively to build out existing markets as well as pursue additional markets such as India. POWRtec plans to use investor proceeds to continually develop the existing product range, as well as to fund further cutting-edge products to meet future client or market needs.
